Dear Chairman Leahy, Vice Chairman Shelby, Chair Baldwin and Ranking Member Hoeven:

Wildlife causes more than $12.8 billion in damage each year to natural resources, public infrastructures, private property and agriculture. USDA Wildlife Services (WS) works to prevent, minimize or manage this damage and to protect human health and safety from conflicts with wildlife. Wildlife damage to U.S. livestock, aquaculture, small grains, fruits, vegetables and other agricultural products has been estimated to reach nearly $1 billion annually. Wildlife predators cause more than $232 million in death loss to livestock; field crop losses due to wildlife total $619 million annually; losses to vegetables, fruits and nuts total $146 million annually; and 70% of catfish farmers incur wildlife-related damage resulting in losses of $6 to $12 million annually from double-crested cormorants in Mississippi alone. As a result, WS is an essential program to U.S. agriculture.

WS assists farmers and ranchers in 50 states and 2 territories to reduce the impact of predators on their animals, protecting 4.5 million head of cattle, 3.4 million head of sheep, and 550,000 head of other livestock in 375,000 direct control actions and nearly 80,000 technical assistance activities that enable 12,043 producers to implement improved husbandry and methods such as the use of guard animals, exclusion, fencing, and predator dispersal. WS conducted 88 predator management workshops attended by more than 6,900 individuals from 23 states and Puerto Rico. WS conducted direct cormorant management on 61 roosts at 77 facilities in 3 south-central states and assisted 200 producers with permit applications to protect aquaculture, surveyed 61 roosts containing 57,500 double-crested cormorants, dispersed 164,378 cormorants and removed 11,797 from 21 states to protect farmed fish from avian depredation, an industry valued at $1.5 billion nationally.

In this unique year, WS deployed a total of 343 personnel days for five mobilized responses related to animal diseases, natural disasters and special projects with local, state, and Federal agencies. WS Emergency Responses included COVID-19 in mink (Oregon), virulent New Castle (Southern California), and Chronic Wasting Diseases surveillance. WS provided critical care for domestic animals and livestock during the California and Oregon wildfires.

The spread of wildlife-borne diseases to humans, livestock and other wildlife is a growing concern. WS is often the first line of defense in reducing and eliminating diseases such as the West Nile virus, avian influenza, pandemic H1N1, chronic wasting disease, pseudo rabies, bubonic plague, Hantavirus, Lyme disease, bovine tuberculosis and rabies. In fact, rabies-associated costs range from $300 to $450 million annually in the U.S. primarily for pet vaccinations, education, diagnostics, post-exposure treatment and case investigations. In 2020, WS distributed more than 9.3 million oral rabies vaccination baits over
58,000 square miles and collected samples from more than 6,800 wild animals in 20 States to reduce rabies in wildlife and prevent disease spread to people, livestock and pets. WS also collected disease samples from more than 12,400 animals from 98 different wildlife species in 39 states, testing for 29 diseases, including: chronic wasting disease, Lyme disease, plague, and tularemia.

WS encountered gray wolves in six states: dispersed five, captured-and-released 58, and intentionally lethally removed 381. In collaboration with State wildlife agencies, the U.S. Fish and Wildlife Service (FWS) and Tribes, WS can address livestock depredation and protect human health/safety related to wolves. It provides service to capture and mark wolves and grizzly bears for research and population monitoring. In one state, WS conducted operations with grizzly bears, capturing/relocating 14 and lethally removing six. Congressional funding of $1.38 million supported protecting livestock from large carnivore predation in 12 states using nonlethal strategies such as range riding, fladry installation, and electric fence-building. WS filled 18 positions in 11 States to implement these strategies and two National Wildlife Research Center units evaluated the effectiveness of activities to reduce depredation.

WS flew 69 aircraft in 14,535 hours of flight time, a total of 1.24 million miles of low-level flight operations to conduct livestock protection via predator removal, removal of invasive feral swine and brown treensakes, aerial delivery of vaccine baits for rabies, emergency response and other missions. It is estimated that there are more than 6 million feral swine in at least 35 states and while initial damage estimates were greater than $1.5 billion per year, more recent reports suggest that figure is more likely between $2 and $2.5 billion annually with more than $800 million of damage to agriculture resources.

In FY20 alone, WS conducted nearly 80,000 technical assistance projects to reduce wildlife damage to property in urban, suburban and rural locations across the country, which include: homes, schools, industrial facilities, roads, bridges, airports and airport runways, dams and electrical and water systems. In addition, WS works to protect wetlands habitat, riparian habitat, tidal marsh and timber from a variety of pest species including feral hogs and nutria, as well as the destruction that beaver can cause. Through cooperator-funded beaver damage management on more than 6,100 sites in 43 states, to protect roads, bridges, timber, agriculture, property, and native habitat and other natural resources from flooding damage estimated at $92.2 million.

Protection of natural resources is a growing need. WS has invested resources in conservation of game species including mule deer, bighorn sheep, antelope and waterfowl in eight states. In FY20, WS selected 35 projects in 12 states - in cooperation with the Natural Resources Conservation Service under the latest Farm Bill - focusing on specific problem populations, while continuing work to reduce feral swine damage in a total of 37 states and 3 territories totaling about 192 million acres. In addition, WS protected 269 threatened and endangered species in 46 states and two territories with $12.4 million of funding from cooperating agencies and others in support of the Endangered Species Act. WS had more than 3,300 cooperative agreements including, agriculture, forestry, private industry, state wildlife agencies, state departments of health, state departments of agriculture, schools, universities, counties, local governments, Tribal governments, homeowner associations, conservation groups and others that together with WS, mitigate the damage and dangers that wildlife can inflict.

As the “Miracle on the Hudson” demonstrated in 2009, the management of wildlife hazards on and near our nation’s airports is a critical safety priority. WS provides valuable support to the aviation community in addressing these hazards. From its assistance in preparing FAA-required wildlife hazard assessments to its help with managing hazardous wildlife populations, WS staff ensure that U.S. airports both meet the regulatory obligations under 14 CFR Part 139 and reduce the safety risks associated with aircraft wildlife strikes. WS also assists the FAA in monitoring national trends regarding wildlife populations and the hazards they pose to aviation. At a time when airports are facing significantly expanded wildlife hazard
management requirements through recently issued FAA Advisory Circulars and grant assurance modifications, its role will be even more critical to the aviation community going forward.

Over 243,000 wildlife strikes with civil aviation have been reported to the National Wildlife Strike Database for Civil Aviation since WS began keeping records in 1990. In FY20, WS processed more than 12,800 strikes with civil aircraft and over 7,800 strikes with military aircraft were reported. Strikes have cost the total U.S. aviation industry well over $5 billion since 1990. This past fiscal year, WS provided assistance and training to 3,883 airport and military personnel working with 776 civil, military and joint-use airports, including 73% of all U.S. commercial airports to prevent wildlife from colliding with aircraft, improving travel safety for passengers. Moreover, WS provided direct staff support to reduce aviation hazards at 138 U.S. or coalition military airbases stateside and in southwest Asia, the Pacific Rim and international locations, and at 102 civil-military airports protecting American aviation assets and personnel. Damaging strikes have decreased as a result of wildlife mitigation and awareness efforts at airfields.

It has been WS's cooperative nature that has allowed it to accomplish all of the above listed programs and has made it the most cost effective and efficient program in the federal government in the areas of wildlife damage management and public health and safety.

Chairman Leahy, Vice Chairman Shelby, Chair Baldwin and Ranking Member Hoeven we appreciate your demonstrated leadership and strong support of this essential program. Our organizations are committed to working with you to strengthen WS resources and to ensure a continued federal partnership in the responsible management of our nation's wildlife.
